#### Profile Summary\_

Innovative and results-driven **Software Developer with 1+ years** of experience in full-stack development, specializing in building robust, scalable, and user-centric applications. Proficient in TypeScript with extensive experience in frameworks like React.js, Node.js, Skilled in database management and I have successfully delivered multiple end-to-end projects.

Skills

- ReactJS | NodeJS | ExpressJS | MongoDB | MongoDB-Aggregation-Pipeline | TypeScript | JavaScript | jQuery | | Redux-toolkit | HTML | CSS | SCSS | TailWindCSS | MYSQL | C | Python | REST-API | API-Integration.
- Bitbucket | JIRA | Github | Netlify | Front-end | Back-end | Full Stack | JS-Frameworks | Postman
- Teamwork | Project Management | Creativity | Productivity | Communication

Professional Experience \_\_\_ Software Developer

Cresc Datasoft Pvt Ltd.

Bengaluru,India 09/2023 - present

## BDS (Web App) :-

Roles and Responsibility: -

- Engineered a cutting-edge module to streamline data addition and edit functionality, optimizing component performance and driving a 50% increase in database efficiency.
- Implemented callback hooks in ReactJS to resolve critical bugs and optimize system performance, resulting in a 40% reduction in app crashes and a 25% increase in overall application speed.
- Design a module that extracts data from the database and **transfers it to Excel**.
- Implement and manage the MongoDB database, including schema design and aggregation-Pipelines.

#### **HRMS** portal:-

Roles and Responsibility: -

- Developed a cutting-edge login module that utilizes both JWT authentication and OTP-based authentication.
- API Development: Developed RESTful APIs using Node.js and Express.js.
- Database: Implement and manage the MongoDB database, including schema design and aggregation-Pipelines.
- Authentication and Authorization: Implement secure user authentication with JWT and role-based access control.
- **Business Logic Implementation** Develop server-side logic for handling HRMS functions such as attendance, employee information, and **punching time in/out** using **MongoDB-aggregation-pipelines**.
- Performance Optimization: Optimize backend performance for scalability and efficiency.

Education			
Master of Computer Applications <ul><li>75% marks with Honours.</li></ul>	<b>Bundelkhand University</b>	Jhansi,India	10/2021 - 07/2023
<b>Bachelor of Computer Applications</b> • With 64% marks.	Shri Ramswaroop Memorial University	Lucknow,India	07/2018 - 07/2021
Intermediate • With 90% marks.	<u>Tileshwari Devi Intermediate College</u>	Ballia,India	03/2016 - 03/2017

#### Projects

- **Elearn (Learning App):** This application is a web-based learning system using **MERN Stack** Technologies. **(08/2024)** 
  - Tools & technologies used: ReactJS, NodeJS, ExpressJS, MongoDB, Redux-Toolkit, SCSS, TailWindCSS, API, JWT.
  - **Description**:- We have developed elearn through which we students and teachers can register for courses. We can also assign which course to whom. And students can also purchase courses and the admin can also track the students' courses.
- Foodzy: This application is a web-based food ordering system using MERN Stack Technologies. (07/2023)
  - Tools & technologies used: React[S, Node[S, Express[S, MongoDB, API, Payment-Gateway(Rozarpay)
  - **Description**:- Developed and launched a cutting-edge MERN-based food delivery web app, streamlining the ordering process for users and increasing revenue for local restaurants by 40%.
- Online Code Editor: Utilized TailwindCSS, ReactJs and NodeJs to create a visually appealing web app. (05/2023)
- Weather App: To generate a Web Application and obtain weather data from the openweather API, I utilized Tailwind CSS, React S.

### Certificates\_\_\_\_\_

1. Certificate of Full Stack Developer from Udemy. 2. Certificate of Coding Competition Organizer in College.
